

Parts for Order Picker Forklift

Order Picker Forklift Part - Order preparation operation or order picking as it is more commonly known is a method used within warehouse operations and consists of workers known as order pickers. The order picker's task is to take and collect articles in particular quantities to fulfill the client's orders previous to shipment. Order picking is a basic warehousing process. The effectiveness in which this task is completed could be directly connected to a supply chain's productivity. Thus, order picking is among the most controlled logistic methods. Order picking falls in the category of the warehouse management system.

There are several specific kinds of order picking. The main types consist of: pick to box method, wave picking method, picker to part method or piece picking, sorting systems method and zone picking method.

The pick to box method comprises the order picker filling the box with the items from her or his station. The box then moves to the other picking stations until the customer order is complete. In this particular process, there is no movement of the order picker personnel. In the wave picking method, the order pickers move all-around to be able to collect the needed products for several orders. The picker to part method or piece picking is similar where the order pickers or picker move to collect the items required but for one order only.

There is no movement by the order picker in the sorting systems method. Rather, things are delivered to the orderpicker by an automatic system like a conveyor system or an automatic storage system. In the zone picking method, every order picker is assigned to one particular zone. They are responsible for just realizing order picking in this specific zone.
